

Exhibit 2

US8677116B1 1. A method of using a computer system to authenticate a user seeking to conduct at least one interaction with a secured capability provided by a computer, the method comprising:	<p>McCOY Corporation's website "mccoys.com" ("The accused instrumentality")</p> <p>The accused instrumentality practices a method of using a computer system (e.g., authentication server of the accused instrumentality, etc.) to authenticate a user seeking to conduct at least one interaction (e.g., account login, shop products, etc.) with a secured capability provided by a computer (e.g., server of the accused instrumentality).</p> <p>As shown, the website of the accused instrumentality practices providing secure connection with a user's device (electronic device of the user) through HTTPS connections. This is achieved by an authentication server (a computer system) authenticating users seeking to perform actions such as account login, shop products, etc., (interactions) ensuring that interactions with secured features are protected from unauthorized access.</p>  <p>https://www.mccoys.com/</p>
---	---

A screenshot of a web browser showing the McCoy's Building Supply login page. The URL in the address bar is <https://www.mccoys.com/login>. The page features a yellow header bar with the McCoy's logo and a promotional message about free delivery. Below the header is a dark green navigation bar with links for Shop Products, DIY Center, and Pro Center. A search bar and user account icons are also present. The main content area has a large image of a McCoy's building with a sign that reads "YOUR ACCOUNT HAS A NEW LOOK". Below the image is a "User Sign-In" form with fields for Username (email) and Password, a "Show password" checkbox, and "Sign in" and "Forgot Password" buttons. To the right of the sign-in form is a sample McCoy's credit card with the number 1234 5678 9012 3456 and the text "PREFERRED CUSTOMER". A link "Looking for your McCoy Card Account? Click here." is also visible.

<https://www.mccoys.com/login>

The screenshot shows a web browser displaying the [mccloys.com](https://www.mccloys.com/) website. A security certificate overlay is visible on the left, stating "Connection is secure" and "Certificate is valid". The main page features a yellow header with the text "Free delivery on orders over \$50 with code FREEDELIVERY. See details." and a "Pro Center" link. The main content area has a green background with a large "STORE TO DOOR FREE DELIVERY" banner, featuring a woman handing a bag to a man. Below the banner are six category icons: Building Materials (stacked wood), Doors & Windows (window frame), Electrical (power outlet), Farm, Ranch & Pet (cow), Fasteners (screws), and Fencing (fence panels). The URL <https://www.mccloys.com/> is highlighted at the bottom of the page.

Security overview

This page is secure (valid HTTPS).

 Certificate - **valid and trusted**
The connection to this site is using a valid, trusted server certificate issued by WE1.
[View certificate](#)

 Connection - **secure connection settings**
The connection to this site is encrypted and authenticated using TLS 1.2, ECDHE_ECDSA with X25519, and AES_128_GCM.

 Resources - **all served securely**
All resources on this page are served securely.

of time;

achieved by an authentication server (a computer system) authenticating users seeking to perform actions such as account login, shop products, etc., (interactions) ensuring that interactions with secured features are protected from unauthorized access. The server sends a response to set `CART_SESSION` value, which is set by the user device.

As shown, the `CART_SESSION` token set by the end device is reused in all further communications with the server. The `CART_SESSION` token also mentions a `Max-Age` for the token, indicating that it can be reused for a finite period.

in response to an indication from the processor that the user is authorized to conduct the at least one interaction with the secured capability, using the computer system to transmit a third signal comprising authorization information to at least one of the electronic device and the computer.	The accused instrumentality practices in response to an indication from the processor (e.g., processor of the authentication server of the accused instrumentality, etc.) that the user is authorized to conduct the at least one interaction with the secured capability (e.g., secure connection with the website, etc.), using the computer system processor (e.g., authentication server of the accused instrumentality, etc.) to transmit a third signal comprising authorization information (e.g., a response signal from the server to the user device, etc.) to at least one of the electronic device (e.g., user device, etc.) and the computer. As shown, upon authenticating the CART_SESSION, the user device receives an authentication confirmation message (a third signal), from the server to the user device.
